

Engineered Ends

Now available on Multideck 60 and Multideck 80

Engineered End deck sheets are regularly used in car park applications. The engineered end detail will remove the need for through-deck welding and will not require the installation of end caps to trapezoidal decks MD60 and MD80 profiles.

Engineered End decks offer the following benefits:

- Reduced site labour removes the need for time-consuming labour installing end closures.
- Improved programme due to reduction in labour time.
- Fewer parts – no need to store end closures on site.
- Improved aesthetics compared to end closure solutions.
- Less grout loss (concrete leaking).
- More concrete over beams increasing their performance.
